FIELD NOTES

Illinois State Geological Survey

See map 4107 d5-89

G3
67c July 19, 1920
Gully in Center SW/4 Sec. 36 T7S R4W.

Get old coal dumps and fireclay in bed of creek - apparently position of coal at 570 Barometer.

600

Top thin platy.

This thin platy sandstone resembles Sodom shale.

Position of No.2 Coal. Top 570± Barometer. Said to be 5'.

Sandy clay, probably floor of coal.

Drift covered (Stark)

G4
7b July 19, 1920
Gully heading in NE/4 SE/4 Sec.36 T7S R4W.

600

Get flaggy whitish sandstone (Sodom shale), top 590±. 20' (Bar.) above probable position of coal in last locality. Dip to west 3-4°.
Sandy shale dipped to west 7-10°.

?

550

Just west of road get coaly layer about 18" thick below sandy shale noted above and resting on sandstone. Barometer probably too high for coal - Map 530±.

No.2 Coal.
