

Accessibility Statement

This publication has gone through accessibility checking. However, technical constraints, including the highly detailed and visually complex nature of maps, limit the ability to make all aspects of the publication fully accessible in its existing format. If a user needs additional assistance with accessing this publication, please contact Illinois State Geological Survey at info@isgs.illinois.edu.

Coal Mines in Illinois Harrisburg Quadrangle Saline County, Illinois

Springfield Coal

This map accompanies the Coal Mines Directory for the Harrisburg Quadrangle and maps of mines in the Herrin and Davis/Dekoven Coals, Harrisburg Quadrangle. Consult the directory for a complete explanation of the information shown on this map.

Disclaimer

Please check the Bedrock Geology Section at the Illinois State Geological Survey's web site <https://go.illinois.edu/Quadrangle> for the most up-to-date version of these products.

Note that each quadrangle scale mined-out area map requires the use of the associated text directory for full explanation of map features and mine attributes. Also note that some quadrangles have multiple seams of mining and therefore more than one map may be available for a particular quadrangle. Please take care to check for multiple maps, as extensive mining may exist in the other seams.

The maps and digital files used for these studies were compiled from data obtained from a variety of public and private sources and have varying degrees of completeness and accuracy. This compilation map presents reasonable interpretation of the geology of the area and is based on available data. Locations of some mine features may be offset by 500 feet or more due to errors in the original source maps, the compilation process, digitizing, or a combination of these factors. These data are not intended for use in site-specific screening or decision-making. Use of these documents does not eliminate the need for detailed studies to fully understand the geology of a specific site. The Illinois State Geological Survey disclaims any liability for the accuracy or the data or any guarantees, expressed or implied, regarding the correctness of the interpretations presented in this data set and accept no liability for the consequences of decisions made by others on the basis of the information presented here.

These maps were designed for use at 1:24,000. Enlarging the map may reduce accuracy, as the original scale of the source maps used to compile the outlines shown varies from 1:400 to 1:150,000, and some mine locations are known only from text descriptions. See the accompanying mine directory for the original scale of the source map used for a specific mine to check accuracy of a given portion of the map. Areas with no mines shown may still be undermined; see the unlocated mines list at the back of each mine directory.

The image of the U.S.G.S. topographic base map was projected from the original UTM to Lambert Conformal Conic.
