The Mecca Quarry Shale (see Fig 4)

overlies the Francis Creek Shale and

rests directly on the Colchester Coal

where the Francis Creek is absent. It is

a hard, fissile, black shale that locally

reaches 4 feet in thickness but gener-

ally ranges from 1 to 2 feet thick. The

Mecca Quarry is a transgressive marine

However, these interpretations are based on data that may vary with respect to accuracy of geographic location, type, quantity, and reliability, as they were supplied to the Illinois State Geological Survey. Consequently, the accuracy of the interpreted features shown in these files is subject to the limitations of the data and varies from place to place. Contoured features less than 7 million square feet (about 1/2 mile square) in area may not be accurately portrayed or resolved. This data set provides a large-scale conceptual model of the geology of the area on which to base further work. These data are not intended for use in site-specific screening or decision-making.

present interpretations of the geology of the area and are based on available data.

Data included in this map are suitable for use at a scale of 1:100,000. Disclaimer
